

Prof. Hoki is giving open seminar at our laboratory

Prof. Emeritus Makoto Hoki (Mie University; graduated from our department, Kyoto Univ.), is giving us an open seminar entitled “Present situation and future prospects of biomass utilization” on Nov.22 (Mon). We are expecting many people are coming to discuss on it at S-177 as below.

Time and Date: 13:00-14:00, Nov.22 (Mon)

Room: S-177

Abstract: Biomass is a renewable resource of energy as well as food, fiber and industrial material. One of the important things in dealing with biomass is the fact that the process of biomass waste management is directly related to energy conversion and environmental conservation. It is therefore considered to be a valuable resource for establishing a sustainable society in the 21st century. Also, this is an excellent field for multidisciplinary research and development.
