

Dr. Shiraga received the Best Young Scientist Award
Division of Terahertz Spectroscopy, Spectroscopical Society of Japan

A symposium Symposium on Frontier of Terahertz Science III, Division of Terahertz Spectroscopy, Spectroscopical Society of Japan was held at Fukui University on Nov.23-25, 2016 and gave Dr. Shiraga the Best Young Scientist Award for his presentation “Characterization of the hydration state and the hydrogen bond destructuring effect of disaccharides”. Congratulations! We wish our members follow him and make good presentations with higher presentation skills and advanced technologies based on multifaceted solutions. I expect many young researchers who can contribute to this real world launch from our laboratory.
