

Laboratory of Bio-Sensing Engineering

The Second Open Seminar, 2014

Prof. Francisco Rovira- Más
(Agricultural Robotics Laboratory
Polytechnic University of Valencia,
Spain)

**Title : “New technologies for new challenges:
Food production in the future”**

Room: W-402, Faculty of Agriculture Building

Time and Date: 14:45~15:15, June 10 (Tue), 2014

Abstract: The objective of this talk is to stimulate the audience to think and discuss on the future of agriculture. Prof. Rovira will expose some of the big challenges faced by the production of food at present, and will share his views on the role that new technologies, in particular robotics, precision agriculture, and information technologies, will play in overcoming these challenges. The approach followed by the European Commission for promoting research in agriculture will be discussed as an example of the part that new technologies will surely take in our everyday's life.

Anyone is welcome!
